

StorageCraft®

Cloud Backup

For Office 365

Protect All Your Critical Office 365 Data.
Part of the Robust StorageCraft Recovery Solution™.

Introduction

Organizations understand that they need to protect their most important asset, their data. In today's world data can be anywhere. It may reside in an organization's physical server, in a virtual server in the cloud, or it can even reside in both at the same time. Critical data needs to be protected and available whether it's hosted locally or in the cloud. Microsoft Office 365 provides significant advantages to organizations of all sizes, however, this SaaS version of Microsoft's flagship productivity application, which stores files and data in the cloud, demands the same high level of data backup and recovery functions as its on premise version.

The Need

Since SaaS applications exist in the cloud many organizations and individuals believe that their valuable data is automatically protected and available. Cloud-based application vendors do provide a basic level of protection, but their backups are designed to meet their platform requirements and not those of end users. Customer data must be:

- Safe from the most common cause of data loss, user errors
- Recoverable from data loss due to system errors
- Available longer than a short 30-day window
- Protected against internal and external threats
- Available quickly when needed in the proper format

SaaS application users need to make sure that they have these additional levels of protection and accessibility in order to meet basic organizational needs.

The Solution

To meet this critical need for cloud-based protection, StorageCraft® Cloud Backup™ for Office 365® provides a flexible, easy-to-use solution for the protection, management and recovery of Office 365 data. It is protected, encrypted and made available through an intuitive, web-based interface. Users can quickly recover a file, a folder, or an entire backup quickly and easily in its original format.

The Coverage

StorageCraft Cloud Backup for Office 365 provides protection for:

- **Exchange**
All email activities and Exchange data going back as long as needed or prescribed
- **Calendars and contacts**
Data saved for multiple previous revisions, edits and versions
- **OneDrive for Business**
Everything that is needed from Office 365 processes is collected, encrypted, protected and readily available
- **SharePoint®**
Protection of base SharePoint organizational data
- **Public shared folders**
Availability of all data that is in use in public shared folders across user defined time periods

Features and Benefits

Feature	Benefit
Accessibility	Service is available through an Internet-connected device
Protection of Backup Data	Data is protected by state-of-the-art compression, encryption in SAS 70-certified centers
Efficiency & Reliability	Users can restore a document, a folder, or all content without deleting or overwriting files
Fast Recovery	Needed files or folders can be identified, restored and downloaded immediately
User Transparency	Data additions or changes are identified automatically and backed up without user intervention
Ease of Use	All backup and recovery controls are menu-driven, intuitive, and complete
Best Use of Resources	Lower IT costs: no hardware overhead, no worries about updates
Flexibility & Scalability	Easy to adjust to the changing demands of systems or users
