

Protect Your Backups Offsite in a Customizable DR Cloud

Local backups are sufficient to recover from common disasters, but a site-destroying event requires a remote recovery solution if your business is to survive. StorageCraft® provides a highly customizable disaster recovery cloud that you can manage through an easy-to-use, self-service online cloud portal. With StorageCraft Cloud Services™ you can tailor your coverage to meet your unique recovery and budget requirements while enjoying access to data anytime, anywhere and instant failover in a cloud built specifically for disaster recovery.

Customized to Meet Your Needs

StorageCraft Cloud Services combines low setup, management and overhead costs with high flexibility to meet your offsite disaster recovery requirements. Available in three Service Levels customized to fit your needs, StorageCraft Cloud Services can be used for everything from secure offsite storage to rapid recovery of files and folders to instant virtualization of systems in the cloud. Plus, you can select cloud Retention Tiers that best meet your recovery point objectives and only pay for the recovery points you need in the cloud while having as many recovery points as you'd like onsite. Or, customize your retention settings further using our Flex option. And when you need intra-daily recovery points, simply click the Generate Recovery Point button in the cloud portal to create an on-demand intra-daily recovery point. Finally, you have the option to have your backups mirrored* to a second data center for an additional level of redundancy.

| Retention Tier 1 | Retention Tier 2 | Retention Tier 3 | Retention Tier Flex Option |
|--------------------------|---|---|--|
| Daily Recovery Points: 3 | Daily Recovery Points: 5 Weekly Recovery Points: 2 | Daily Recovery Points: 7 Weekly Recovery Points: 4 Monthly Recovery Points: 3 | Choose your own recovery point settings. |

Cloud Basic

Secure offsite storage of your critical business backups with full system restore via a bare metal restore (BMR) drive

EXAMPLE: Non-critical desktop (non-critical workstation)

EXAMPLE: Non-critical server (non-critical servers)

Cloud Plus

Everything in Cloud Basic, plus immediate file and folder recovery from the cloud

EXAMPLE: Executive workstation (critical laptop)

Cloud Premium

Everything in Cloud Plus, as well as instant virtualization of your systems and data in the cloud

EXAMPLE: Exchange server
Active Directory
File Server
Database Server
Small Business Server
(mission critical servers)

Mirroring* your backups to a second datacenter to gain an additional level of redundancy is available in the United States.

At-a-glance:

Protect your physical servers, virtual machines and workstations in the secure StorageCraft Cloud and gain valuable methods to recover systems and data in seconds.

Where it fits in The StorageCraft Recover-Ability Solution:

Use with:

- StorageCraft ShadowProtect® and StorageCraft ShadowProtect SPX
- StorageCraft ImageManager™ 6.7.2 or newer

Cost:

Based on monthly machine cloud storage at the selected Service Level and Retention Tier. Mirroring*, seed drives and test bare metal restore (BMR) drives are available for an extra fee.

Uptime That Keeps You Operational

When you store your backup images in the StorageCraft Cloud you get a distributed, scalable, fault-tolerant disaster recovery cloud with no single point of failure. It's monitored and managed 24x7x365 by the StorageCraft Network Operations Center and, with 99.99% uptime, you can rest assured you can access your cloud data anytime.

Security You Can Rely On

Built using enterprise-grade highly available and redundant hardware, plus the highest level of cloud hardware and software architecture security methodologies (including redundant firewalls), this solution provides the security you demand. Our data centers also meet or exceed Telecommunications Infrastructure Standards (TIA-942) and Tier 3 data center requirements.

Flexibility Built In

With StorageCraft Cloud Services you can set up your account in ways that best accommodate your requirements. On top of selecting Service Levels tied to your recovery preference and choosing Retention Tiers so you only pay for the recovery points you need, there are many cloud account settings you can customize also. For instance, you can create and configure cloud account alerts, and if you choose, provide clients with access to their data stored in the cloud through a variety of account permission settings.

Advanced Recovery Network Accommodations

In addition to customizing recovery network firewalls, you can access and update your recovery networks through OpenVPN or IPsec to enable site-to-site, one user, or entire organization virtual private network (VPN) connections. StorageCraft Cloud Services also ensures your recovery network meets your needs during a disaster with advanced networking features such as:

- Port forwarding
- Port blocking
- Network control options such as DHCP
- Independent and isolated recovery networks (important when multiple networks reside on the same IP address)
- Static public IP address reservations (one needed per account due to new port forwarding feature)
- Static private IP address reservations
- Dynamic private IP addresses available at the time of a disaster
