

STORAGECRAFT®

GRANULAR RECOVERY FOR EXCHANGE

Best-in-Class Granular Search and Recovery for Microsoft Exchange mailboxes, folders, and individual messages

Use with Any Backup Software to Quickly Recover Email Messages, Mailboxes, and Other Mailbox Content

Managing Exchange servers can be particularly challenging for small and medium-sized businesses. That's why it's important to include a way to recover email messages and mailboxes quickly and easily. Award-winning StorageCraft® Granular Recovery for Exchange allows you to recover individual or multiple mailboxes from an Exchange database (EDB) file fast. The easy-to-use interface enables you to recover from an Exchange backup to a production Exchange server or PST file.

Use an EDB file from a backup of your Exchange database created with any backup software* to view all of your users' mailboxes with this helpful tool. Navigate to a specific mailbox and drag-and-drop the entire mailbox or as many email messages, attachments, or mailbox items as you need to recover.

StorageCraft Granular Recovery for Exchange is also a powerful search tool that allows you to search mailboxes and email messages based on criteria you specify—directly from an EDB file. Search your Exchange database for specific keywords, or use the Advanced Search option to search based on message dates, senders, recipients, or subject matter. You can also use StorageCraft Granular Recovery for Exchange to quickly search across Exchange server database files including Database Availability Groups (DAG) and Client Access Server (CAS) roles.

By adding StorageCraft Granular Recovery for Exchange to the tools you're already using, you have complete search and recovery of Exchange servers and critical email data.

StorageCraft Granular Recovery for Exchange Includes the Following Benefits:

- Recover one or more mailboxes with ease.
- Restore individual email messages, attachments, and other mailbox content items quickly and easily.
- Throttle data transfers to better manage network traffic during recovery projects.
- Search mailboxes, email messages, or entire Exchange databases for specific keywords.
- Use with any backup software* for easy Exchange recovery.
- Select alternative temporary database locations when limited on hard drive space.

STORAGECRAFT®

Backup Fast, Recover Faster

How It Works:

1. Select a backup of your Exchange server created with StorageCraft or other* backup software.

2. Extract the EDB file and transaction logs from other backup software, or mount a StorageCraft ShadowProtect® backup as a writable image, and place in a local directory.

3. Launch StorageCraft Granular Recovery for Exchange and access the Exchange EDB file.

4. Recover mailboxes, email messages, and attachments or search for messages based on criteria you specify.

StorageCraft Granular Recovery for Exchange Supports:

- Microsoft Exchange Server 2016
- Microsoft Exchange Server 2013
- Microsoft Exchange Server 2010
- Microsoft Exchange Server 2007
- Microsoft Exchange Server 2003

Please review product documentation for a complete list of application and client system support.

Save Time

Shorten the time required to recover or search your Exchange database. Restore specific mailboxes, email messages or email attachments quickly with StorageCraft Granular Recovery for Exchange. Restore Exchange servers, mailboxes, or files by dragging and dropping them from your EDB file backup to your production server or to a PST file.

Save Money

Exchange recovery can be costly and frustrating. StorageCraft Granular Recovery for Exchange allows you to search and recover your Exchange database quickly and easily, without the need for additional resources or complicated recovery solutions.
